

Environment policy

NIKE HYDRAULICS AB

NIKE HYDRAULICS, with its main activities in Eskilstuna, develops, manufactures, and markets high pressure hydraulic products for industrial, automotive, and rescue applications.

In production chiefly machining and assembling are done. Environmental issues are given priority to on the highest management level. We are making environmental evaluations in all our activities.

Our present and future activities will at least follow current environmental standards and legislation as well as other environmental demands.

We are constantly working to improve ourselves and our suppliers through development of processes and products to minimise the use of resources and pollution to ground and/or water.

Our employees are trained and motivated to do their tasks in an environmentally safe way.

We have an open communication with our employees, customers, the public and the environment authorities by informing of our environmental activities, and by those means take their views and expectations into consideration.

A handwritten signature in blue ink that reads "Stefan Look".

Eskilstuna, 2004-01-22
